

Mercury Losses from the Chlor-Alkali Industry in 2006

**OSPAR Commission
2008**

The Convention for the Protection of the Marine Environment of the North-East Atlantic (the “OSPAR Convention”) was opened for signature at the Ministerial Meeting of the former Oslo and Paris Commissions in Paris on 22 September 1992. The Convention entered into force on 25 March 1998. It has been ratified by Belgium, Denmark, Finland, France, Germany, Iceland, Ireland, Luxembourg, Netherlands, Norway, Portugal, Sweden, Switzerland and the United Kingdom and approved by the European Community and Spain.

La Convention pour la protection du milieu marin de l'Atlantique du Nord-Est, dite Convention OSPAR, a été ouverte à la signature à la réunion ministérielle des anciennes Commissions d'Oslo et de Paris, à Paris le 22 septembre 1992. La Convention est entrée en vigueur le 25 mars 1998. La Convention a été ratifiée par l'Allemagne, la Belgique, le Danemark, la Finlande, la France, l'Irlande, l'Islande, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni de Grande Bretagne et d'Irlande du Nord, la Suède et la Suisse et approuvée par la Communauté européenne et l'Espagne.

Executive Summary

This report continues the series of annual reports on discharges, emissions and losses of mercury by all routes from mercury-cell chlor-alkali plants. The report presents the 2006 data on production capacities, atmospheric emissions of mercury, and the amount of mercury in safely deposited wastes.

Reports on the phasing-out of national mercury-based chlor-alkali production capacities, were included in this report series until 2002. From then, it was included in the "Overview Assessment of the Implementation of PARCOM Decision 90/3 on Reducing Atmospheric Emissions from Existing Chlor-Alkali Plants". OSPAR 2008 agreed that implementation reporting could cease for all Contracting Parties because this annual data collection on losses of mercury from the chlor-alkali industry provides the tool for monitoring the phase-out of mercury cells.

The data have been reported using the reporting formats and procedures agreed by OSPAR in 2003 (reference number 2003-5), which set out the requirements for data and information to be provided via Euro Chlor.

The OSPAR Hazardous Substances Committee agreed in 2005 to continue annual reporting, but with an assessment only every two years until 2009, and then to reconsider the frequency of assessments. Accordingly, this report does not include an assessment. The chlor-alkali report to be published in 2009 will include data for 2007 as well as an assessment of both the 2006 and 2007 data and the trends.

Récapitulatif

Le présent rapport prend la suite de la série de rapports annuels sur les rejets, les émissions et les pertes de mercure empruntant toutes les voies de pénétration, provenant des installations d'électrolyse des chlorures alcalins à cellules de mercure. Le rapport présente les données de 2006 sur les capacités de production, les émissions atmosphériques du mercure et la quantité de mercure dans les déchets mis en décharges sécurisées.

Les rapports relatifs à l'abandon des capacités nationales de production des chlorures alcalins à base de mercure ont figuré dans cette série de rapports jusqu'à 2002. Ensuite, ils ont été intégrés à la « Synthèse d'évaluation de la mise en œuvre de la décision PARCOM 90/3 sur la réduction des émissions atmosphériques des installations existantes d'électrolyse des chlorures alcalins ». OSPAR 2008 a convenu que la notification de la mise en œuvre pouvait cesser pour toutes les Parties contractantes, car la collecte de données annuelles des pertes de mercure provenant de l'industrie des chlorures alcalins constitue un outil pour le contrôle de la suppression progressive des cellules au mercure.

Les données ont été soumises en utilisant les formulaires de notification et les procédures convenus par OSPAR en 2003 (numéro de référence 2003-5), lesquels font état des exigences des données et des informations à fournir par le biais d'Euro Chlor.

Le comité substances dangereuses d'OSPAR a convenu en 2005 de poursuivre une notification, mais avec un rapport d'évaluation tous les deux ans, jusqu'en 2009, date à laquelle il conviendra de ré-étudier la fréquence des évaluations. Par conséquent, ce rapport ne contient pas de rapport d'évaluation. Le rapport sur l'électrolyse des chlorures alcalins devant être publié en 2009 inclura les données pour 2007 ainsi qu'une évaluation des données de 2006 et de 2007 et des tendances.

1. Introduction

Since the beginning of the 1980s, mercury discharges, emissions and losses from the chlor-alkali industry have been addressed under the former Paris Commission (PARCOM). The following Decisions and Recommendations are applicable under the OSPAR Convention:

- PARCOM Decision on Limit Values for Mercury Emissions in Water from Existing and New Brine Recirculation Chlor-alkali Plants (exit of the purification plant), 1980;
- PARCOM Decision on Limit Values for Existing Waste Brine Chlor-Alkali Plants, 1981;
- PARCOM Decision on Limit Values for Existing Brine Recirculation Chlor-Alkali Plants (exit of the factory site), 1981;
- PARCOM Decision on New Chlor-Alkali Plants Using Mercury Cells, 1982;
- PARCOM Recommendation on Limit Values for Mercury Emissions in Water from Existing Brine Recirculation Chlor-Alkali Plants (exit of factory site), 1985;
- PARCOM Decision 90/3 on Reducing Atmospheric Emissions from Existing Chlor-Alkali Plants.

In 1983, Contracting Parties to the former Paris Convention initiated an annual reporting of mercury discharges, emissions and losses from their national chlor-alkali industry. These data were compiled by the OSPAR Secretariat and, following examination by the relevant subsidiary bodies, published by the Commission in form of Annual Reports on Mercury Losses from the Chlor-alkali Industry, which comprised yearly data series from 1982 onwards.

Over time, reporting requirements and formats were regularly reviewed and up-dated in the light of the ongoing work under the Commission as regards the chlor-alkali industry. With a view to harmonising the way in which data and information are being established and reported, the Hazardous Substances Committee (HSC) of the OSPAR Commission adopted in 2003 the current reporting formats and procedures (see OSPAR agreement; reference number 2003-5) which set out the requirements for data and information to be provided via Euro Chlor. Annual data on discharges, emissions and losses of mercury from each plant operating within OSPAR Contracting Parties are reported to the OSPAR Secretariat, which, following a check and confirmation by Contracting Parties, compiles these technical data in form of a report.

OSPAR acknowledges the assistance of Euro Chlor in assembling the information and appreciates the efforts made by Euro Chlor to provide all requested information on a plant-by-plant basis and recommends continuing this procedure in future.

2. Assessment of the report on mercury losses from the Chlor-Alkali industry

The 2006 data will be assessed together with the 2007 data in 2009.

3. Evolution of mercury losses from the chlor-alkali industry (1982-2006)

The following figures give a rough indication of the evolution of mercury losses from the chlor-alkali industry in the period 1982-2006 as follows:

- Figure 1a: Chlorine Production Capacity with Mercury Cells by Contracting Party;
- Figure 1b: Total Chlorine Production Capacity with Mercury Cells;
- Figure 2a: Mercury Losses through Product, Waste Water and Air by Contracting Party
- Figure 2b: Total Mercury Losses through Product, Waste Water and Air;
- Figure 3a: Atmospheric Emissions of Mercury by Contracting Party
- Figure 3b: Total Atmospheric Emissions of Mercury.

It should be noted that these figures use data from previously published OSPAR Reports and that the way in which these data, in particular the pre-1999 data, were calculated and reported might differ:

- from Contracting Party to Contracting Party;
- within a time series of one Contracting Party.

Therefore, the interpretation of the figures is limited and any comparisons have to be carried out with extreme caution.

It should also be noted that Finland and Switzerland were not Contracting Parties to the former Paris Convention. Prior to the entry into force of the OSPAR Convention, the Contracting Parties supplied data on a voluntary basis as follows:

- | | |
|-------------|---|
| Finland | from 1996 onwards, atmospheric emissions from the only mercury-based chlor-alkali plant, which discharges into the Baltic Sea (i.e. outside the OSPAR maritime area); |
| Switzerland | from 1993 onwards, full data sets for the national mercury-based and mercury-free chlor-alkali industry. |

Some information about changes in the reporting over time, as well as explanations of considerable increases or decreases in values, are given in footnotes to the OSPAR Report on Mercury Losses from the Chlor-alkali Industry (1982-1998), which was published in 2000.

A further source of information to be taken into account are the expert assessments, which were included in the publication of the Annual OSPAR Reports on Mercury Losses from the Chlor-alkali Industry from 1996 onwards.

Until 2003, data has been published in Figures 1 to 3 as total figures for each Contracting Party. Since 1998, data has been made available on a plant-by-plant basis¹. In order to improve comparability of performance, plant-by-plant data are now published in:

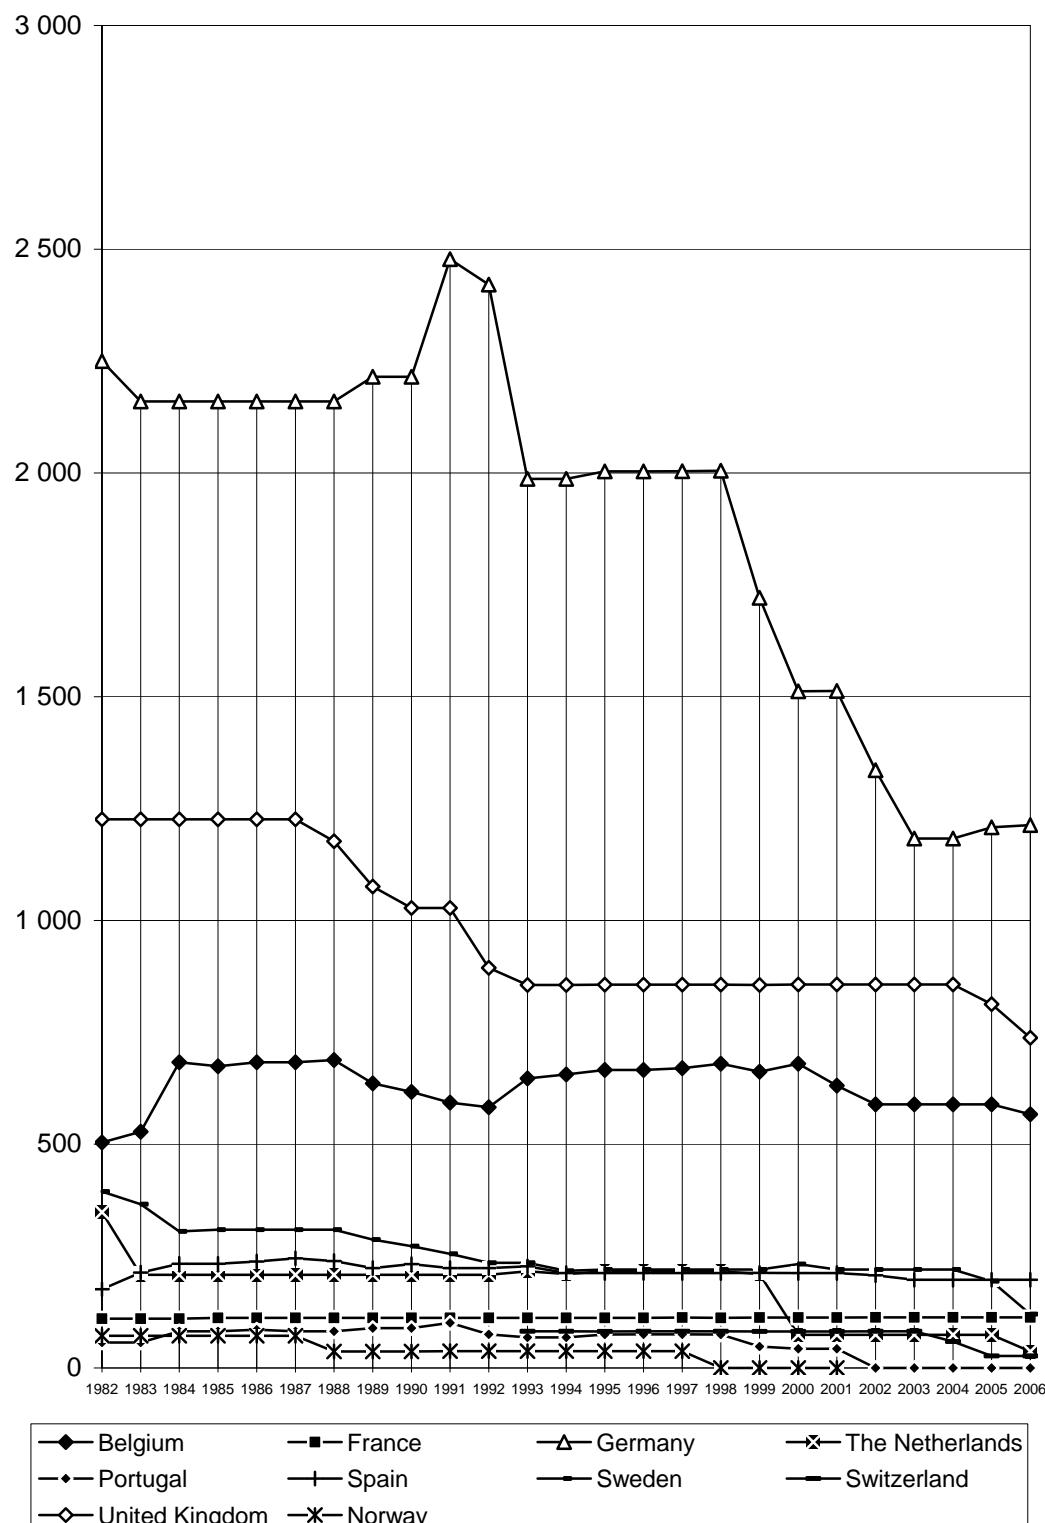

- Table 1: Chlorine Production Capacity with Hg-cells (tonnes)
- Table 2: Mercury Losses through Product, Waste Water and Air (kg per year)
- Table 3: Mercury Losses through Product, Waste Water and Air (g per tonne production capacity)
- Table 4: Atmospheric Emissions of Mercury (kg per year)
- Table 5: Atmospheric Emissions of Mercury (g per tonne production capacity)
- Table 6: Mercury in Safely Deposited Wastes (kg per year)
- Table 7: Mercury in Safely Deposited Wastes (g per tonne production capacity)

The presentation of these figures since 1998 will also assist in:

- a. the review of progress to moving towards the OSPAR 2020 target of the cessation of discharges, emissions and losses of mercury;
- b. the assessment of the effectiveness of the implementation of PARCOM Decision 90/3.

To this end, all locations of mercury-based chlor-alkali plants in operation in 1998 are described in Section 4.2 including when they have been decommissioned or converted.

¹ For plant codes in the tables see section 4.1.

² The Solvay chlorine production unit located in Zurzach (CH/1) was shut down at the beginning of August 2004 and, in agreement with the Euro Chlor rules, a yearly production capacity "pro rata temporis" was considered (i.e. 55 000 t/y * 7 /12 = 32 083 t/y).

* All mercury-contaminated materials, such as cell components, process equipment, solid wastes from sumps, pits, demercurisation units and the brine purification process, which have been sent to authorised and properly controlled toxic waste disposal sites, are to be included in the category "safely deposited waste". For the purpose of the balance, all deposits of mercury in whatever concentrations should be accounted for.

4. 2006 data and information

4.1 Introduction

In this part of the report, data and information about the national chlor-alkali industry of each OSPAR Contracting Party is given as follows:

- a. Contracting Parties with mercury-based chlor-alkali plants:
 - (i) two overview maps showing the locations, the names and the operators of the sites;
 - (ii) tables with technical data on the annual discharges, emissions and losses, including wastes, from plants of each Contracting Party (provided via Euro Chlor);
- b. Contracting Parties with mercury-free plants or without chlor-alkali industry.

The column headings and abbreviations (e.g. C, E1, E2 etc) used in the tables correspond to the reporting requirements set out in the current formats:

Sea Area - Sea area in which liquid wastes from the plant is discharged, or is likely to be discharged

OSPAR maritime area

A - Atlantic

Areas not covered by the OSPAR Convention

Baltic - Baltic Sea

BI Sea - Black Sea

M - Mediterranean Sea

Brine W - waste brine plant
 R - brine-recirculation plant

Values are expressed in continental notation.

4.2 Locations of mercury-based chlor-alkali plants

The two following maps give an overview of the locations of the mercury-based chlor-alkali plants indicated below and their operators:

Country/Code	Company	Location	Status
Belgium			
B/1	Solvin	Lillo	
B/2	Tessenderlo	Tessenderlo	
B/3	Solvin	Antwerpen	
B/4	Solvay	Jemeppe	Replaced its mercury technology in 2001
Finland			
SF/1	Eka Chemicals	Oulu	The permitted discharges and emissions have been increased on the basis of a revised authorisation in 2002
France			
F/1	PC de Loos	Loos	
F/2	Albemarle PPC	Thann	
F/3	Solvay	Tavaux	
F/4	Arkema	Jarrie	
F/5	SPC Harbonnières	Harbonnières	
F/6	Arkema	Lavera	
F/7	Arkema	St Auban	
Germany³			
D/1	ECI	Bitterfeld	Ceased operation in 1999
D/2	Bayer	Uerdingen	Converted to membrane
D/3	Akzo Nobel	Ibbenbüren	
D/4	Bayer	Leverkusen	Shut down in 2002
D/5	BASF	Ludwigshafen	
D/6	Ineos	Wilhelmshafen	
D/7	Vestolit	Marl	Shut down of some cells in 2001
D/8	Degussa - Hüls	Lülsdorf	
D/9	Lil	Frankfurt	The permitted discharges and emissions have been increased on the basis of a revised authorisation in 2001
D/10	Bayer	Dormagen	Ceased operation in 1999
D/11	Clariant	Gersthofen	Shut down in 2000
D/12	Wacker Chemie	Burghausen	Shut down in 2000
D/13	Vinnolit	Knapsack	
D/14	Vinnolit	Gendorf	
D/15	BSL Olefinverbund	Schkopau	Shut down in 1998
The Netherlands			
NL/1	Akzo Nobel	Hengelo	
NL/2	Solvay	Linne-Herten	Decommissioned in 1999
Portugal			
P/1	Uniteca	Estarreja	Has been replaced by membrane cells in January 2002
P/2	Solvay Portugal	Póvoa de Santa Iria	Shut down in 1998

³ Germany advised that 7 plants have been converted. 5 more plants are to be converted.

Country/Code	Company	Location	Status
Spain			
E/1	Quimica del Cinca	Monzon	
E/2	Electroquimica de Hernani	Hernani	Partly converted to membrane technology
E/3	Elnosa	Lourizan	
E/4	Ercros	Flix	
E/5	Solvay	Torrelavega	
E/6	Solvin	Martorell	
E/7	Ercros	Sabinanigo	
E/8	Ercros	Vilaseca	
E/9	Ercros	Huelva/Palos	
Sweden			
S/1	Akzo Nobel	Bohus	
S/2	Hydro Polymers	Stenungsund	Verified value
Switzerland			
CH/1	Solvay	Zurzach	This plant was shut down in 2004
CH/2	Syngenia	Monthey	This plant was shut down in 2005
CH/3	SF-Chem	Pratteln	
United Kingdom			
UK/1	Rhodia	Staveley	This plant was shut down in 2005
UK/2	Albion Chemicals	Sandbach	This plant was shut down
UK/3	Ineos	Runcorn	

4.3 Other OSPAR Contracting Parties

Denmark

Denmark has no chlor-alkali plants.

Iceland

Iceland has no chlor-alkali plants.

Ireland

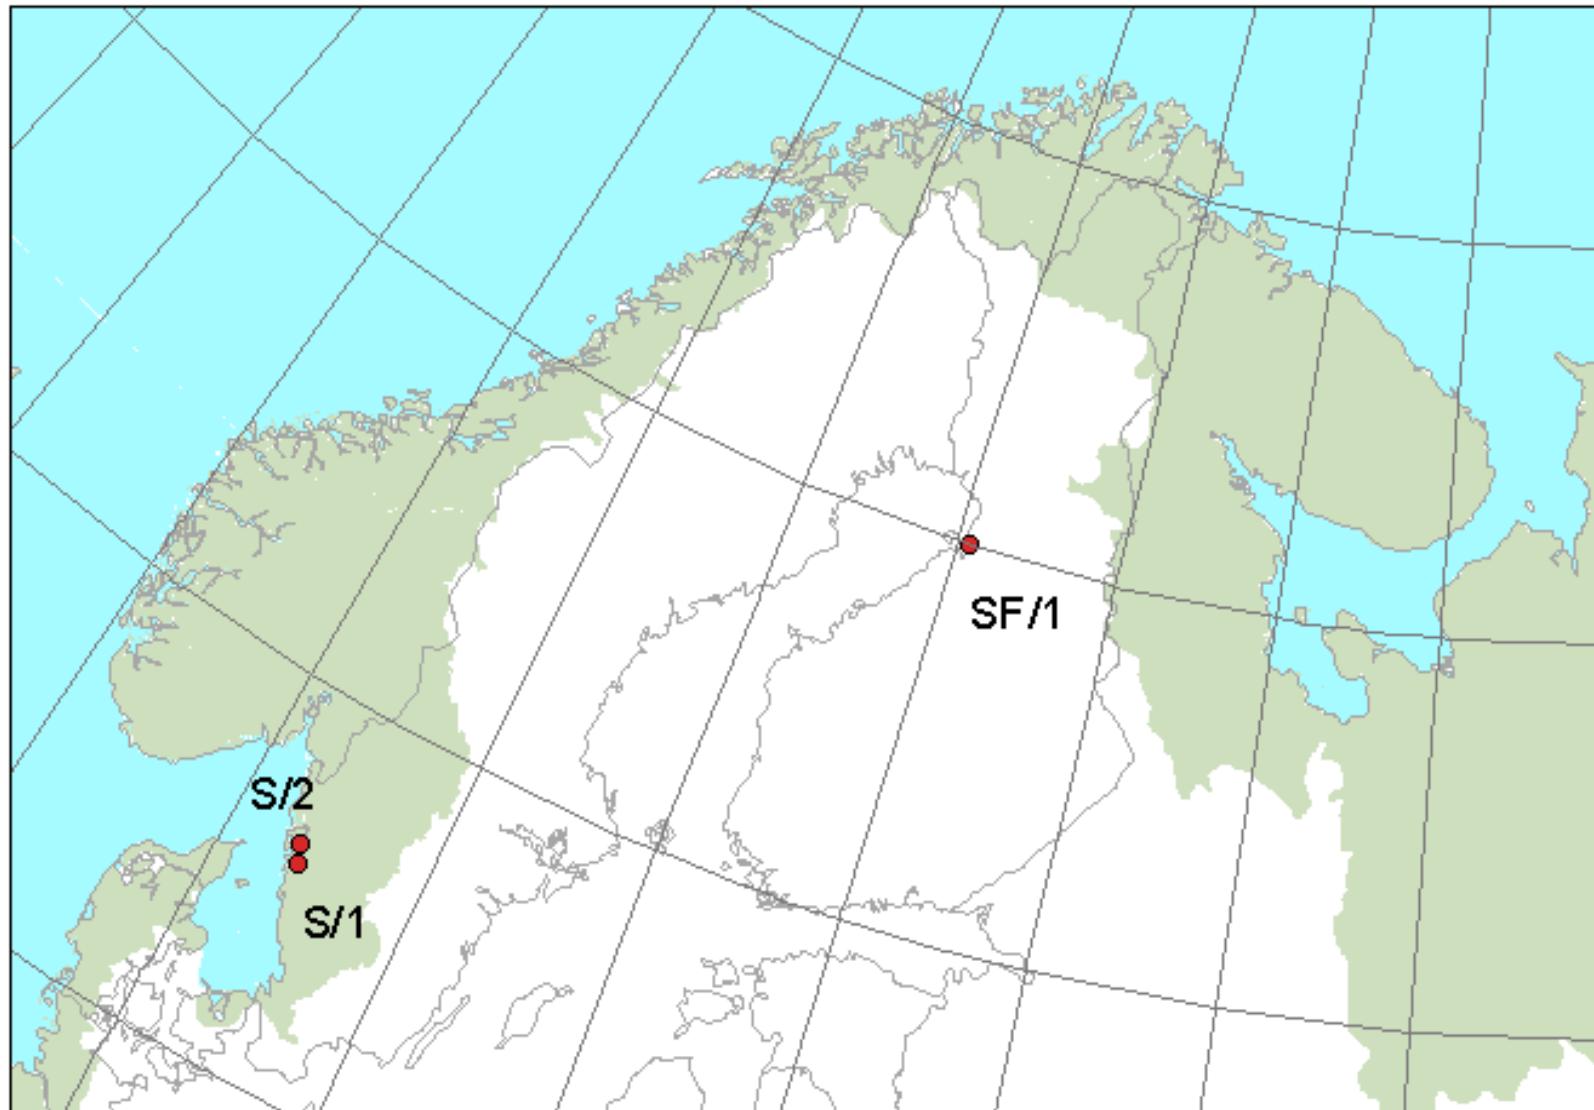

Ireland has only one chlor-alkali plant, which operates mercury-free.

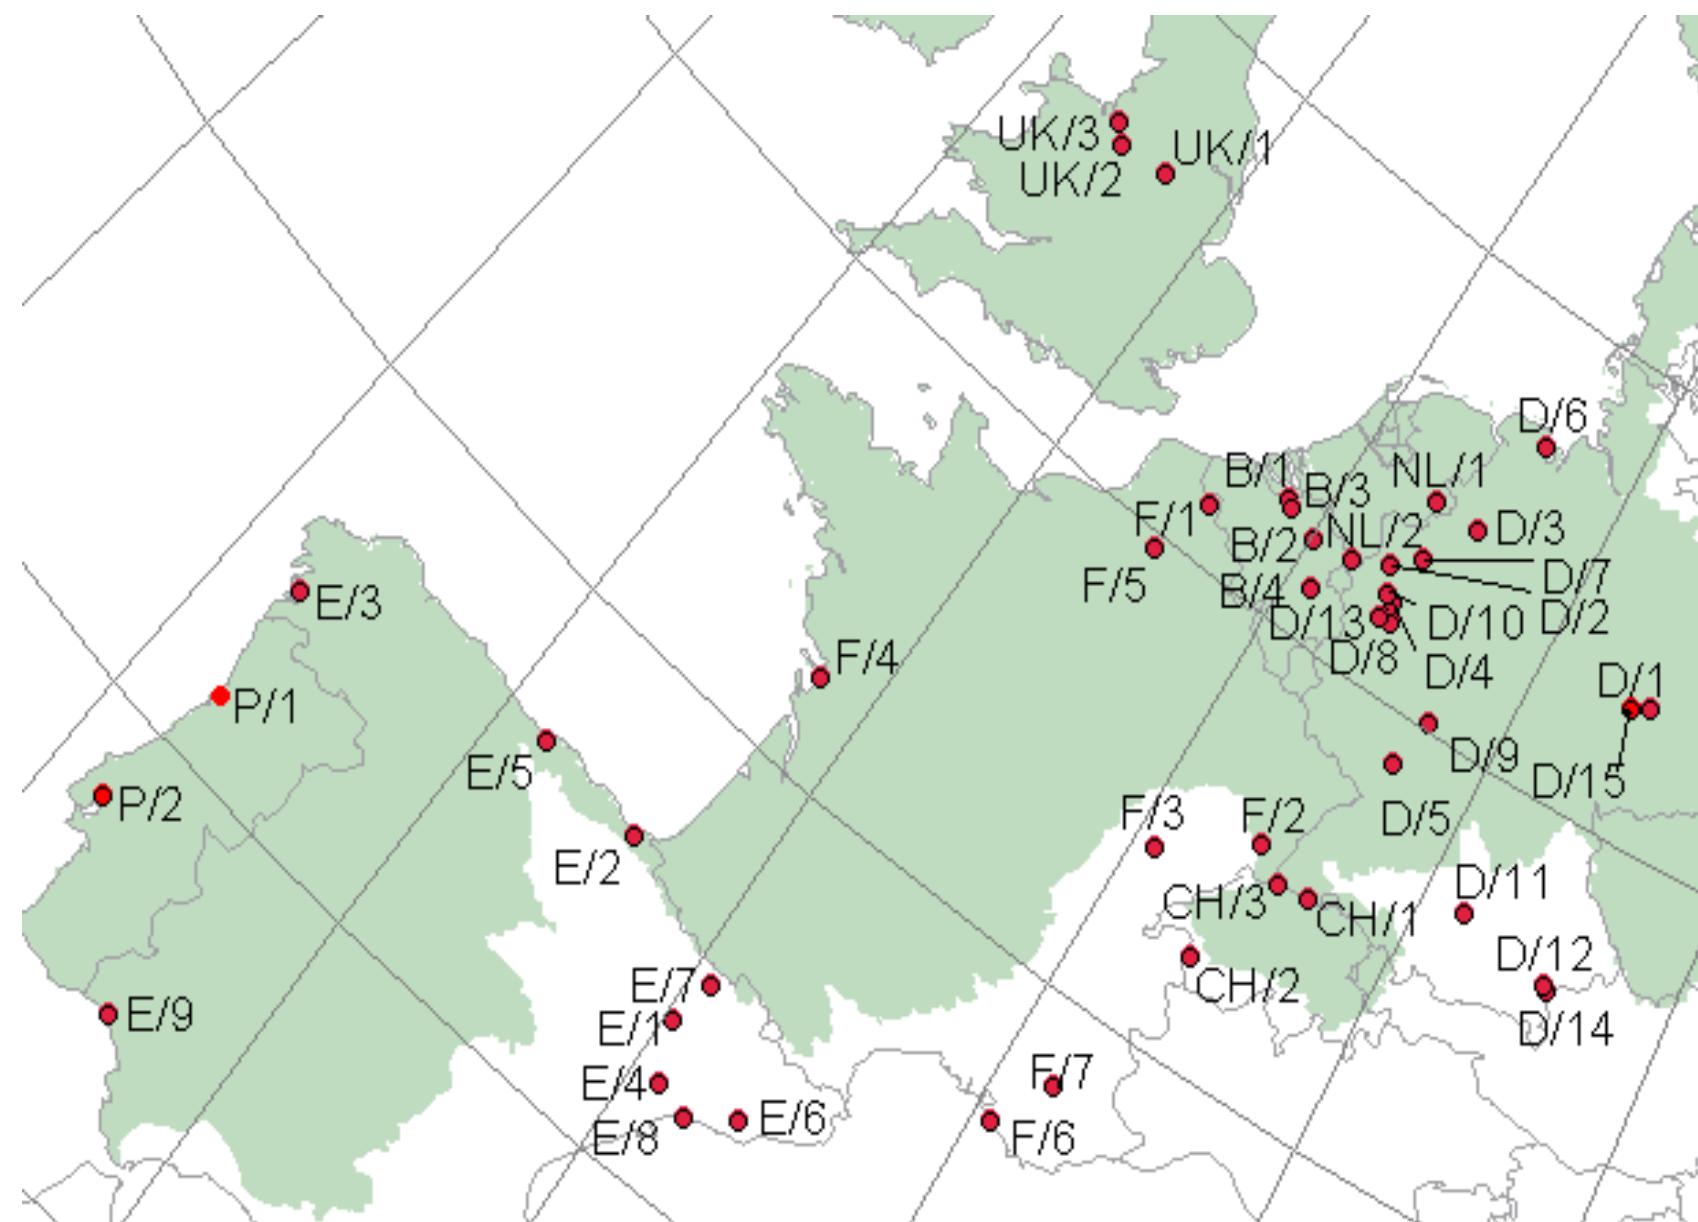

Luxembourg

Luxembourg has no chlor-alkali plants.

Norway

The last Norwegian plant with mercury cells ceased its mercury-based operations in September 1997.

Belgium

* The Solvay chlorine production unit located in Zurzach (CH/1) was shut down at the beginning of August 2004 and, in agreement with the Euro Chlor rules, a yearly production capacity "pro rata temporis" was considered (i.e. 55 000 t/y * 7 /12 = 32 083 t/y).

** The Syngenta chlorine production unit located in Monthey (CH/2) was shut down in January 2005.
