

## Annual OSPAR report on dumping of wastes or other matter at sea in 2008

Denmark had not sent any data for 2008 at the time of publication.

## **OSPAR Convention**

The Convention for the Protection of the Marine Environment of the North-East Atlantic (the “OSPAR Convention”) was opened for signature at the Ministerial Meeting of the former Oslo and Paris Commissions in Paris on 22 September 1992. The Convention entered into force on 25 March 1998. It has been ratified by Belgium, Denmark, Finland, France, Germany, Iceland, Ireland, Luxembourg, Netherlands, Norway, Portugal, Sweden, Switzerland and the United Kingdom and approved by the European Community and Spain.

## **Convention OSPAR**

La Convention pour la protection du milieu marin de l'Atlantique du Nord-Est, dite Convention OSPAR, a été ouverte à la signature à la réunion ministérielle des anciennes Commissions d'Oslo et de Paris, à Paris le 22 septembre 1992. La Convention est entrée en vigueur le 25 mars 1998. La Convention a été ratifiée par l'Allemagne, la Belgique, le Danemark, la Finlande, la France, l'Irlande, l'Islande, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni de Grande Bretagne et d'Irlande du Nord, la Suède et la Suisse et approuvée par la Communauté européenne et l'Espagne.

# Contents

## Part I

### Report on Dumping Permits Issued in 2008

- Table 1: Overview of number of permits issued, tonnes licensed and tonnes dumped in 2008
- Table 2: Specific reporting on dumping operations of dredged material exceeding national action levels for sea disposal within 2008

### Report on the Amounts of Wastes or other Matter Dumped at Sea in 2008

- Table 3a: Details of categories, origin or dredged material, dredging operation, deposit sites and dumping amounts
- Table 3b: Total loads (methods of determination indicated in Part II)

## Part II

- General information
- Additional information
- Footnotes to all tables

## Part III

Maps

*The maps will be inserted at a later stage.*

## Part III

- Figure 1: Locations of dumping sites in 2008
- Figure 2a: Belgium
- Figure 2b: Belgium (Internal waters)
- Figure 3a: France (English Channel)
- Figure 3b: France (Atlantic Ocean)
- Figure 4a: Germany
- Figure 4b: Germany (Estuary of the Elbe)
- Figure 5: Iceland
- Figure 6: Ireland
- Figure 7: the Netherlands

## Part I - Tables

## Report on Dumping Permits Issued in 2008

**Table 1 Overview of number of permits issued, tonnes licensed and tonnes dumped in 2008**

Contracting Party	Number of permits issued for waste category				Number of operations regulated by other means	Tonnes licensed (dry weight)	Tonnes dumped (dry weight)	Notes
	Dredged material	Inert material	Fish waste	Others				
<b>Belgium</b>	11				0	33 780 000	30 906 907

## Part II - Information

# 1. General information

The continental decimal system is used throughout this report. Empty cells indicate that no information was available. Italic numbers are used when the measured/calculated value was smaller than the actual number given in the cell.

## 2. Additional information

(Referring to section 4 of the Format for Annual Reporting on Dumping Operations at Sea (Agreement 2009-3))

### 2.1 Deposit site

#### 2.1.1 Iceland

The following sites were used in 2007 but not in 2008: IS 18, IS 21, IS 22 and IS 25.

The following sites were not used in 2007, but used in 2008:  
IS 6, IS 8, IS 13, IS 27, IS 35, IS 39, IS 46 and IS 50.

#### 2.1.2 France

New deposit sites in 2008:

- F/01409
- F/03327, F/03328, F/00330, F/03336

Closing of existing deposit sites in 2008 or sites whose permit is outdated:

- F/05004
- F/08501, F/03323, F/03324, F/03333, F/03334
- F/04001

#### 2.1.3 Germany

The following new deposit site is notified for the first time by the Federal German State Niedersachsen:

- **“Cuxhaven harbour”** (new OSPAR-Code **D/119**)

At this deposit site sediments are dredged and relocated within the same area by water injection. The coordinates of the transition of the harbour to the River Elbe are taken as the position of the deposit site.

The following two new deposit sites are notified for the first time by the German Federal Water and Shipping Directorate:

- **“km 690, Elbe estuary”** (new OSPAR-Code **D/120**)
- **“Flushing pipe Kiel Canal, Elbe km 696”** (new OSPAR-Code **D/121**)

In three areas granite boulders were dumped by Greenpeace illegally:

- **“Location 1”**, (new OSPAR-Code **D/122**)
- **“Location 2”**, (new OSPAR-Code **D/123**)
- **“Location 3”**, (new OSPAR-Code **D/124**)

new OSPAR code	deposit sites
D/119	Cuxhaven harbour
D/120	km 690,3, Elbe estuary
D/121	Flushing pipe Kiel Canal, Elbe km 696
D/122	Location 1
D/123	Location 2
D/124	Location 3

Co-ordinates of all newly reported deposit sites are summarized in the following table:

Deposit site	Co-ordinates							
	long	lat	long	lat	long	lat	long	lat
D/119	53°52,26'	8°42,78'

<b>Total</b>		<b>85</b>	<b>1 363 813 (tonnes)</b>	<b>5</b>		<b>7</b>	<b>3433 tonnes fish waste</b>

## 2.1.5 Spain

In 2007, the deposit site name *Baiona* (E/9C) corresponds to the dumping site with the OSPAR code E/8 thus the code E/9C should be removed and *Baiona* should be assigned to the code E/8.

The dumping site *Vigo* (E/9) should be removed because it is a dumping site located inside the Vigo harbour.

The table below includes the OSPAR codes for new sites with its geographical coordinates and updated the information of sites used in 2007.

*Geographical coordinates (WGS 84) for Spanish deposit sites*

<b>Name</b>	<b>OSCOM Code</b>	<b>Longitude</b>	<b>Latitude</b>
Ondarroa	E/2C	2° 20' W	43° 24' N
Laredo	E/3B	3° 24,1' W	43° 27,7' N
Colindres	E/3B	3° 24,1' W	43° 27,7' N
Santofña	E/3B	3° 24,1' W	43° 27,7' N

## 2.2 Method of determination

### 2.2.1 France

#### Definition of assumptions made in calculating quantities of dry matter in Table 3a

Relationship between the saturated density of the mixture  $\rho_{sat}$  and the concentration of dry matter

$\rho_{ms}$  :

These two parameters are connected through the following relationship:

$$\rho_{ms} = \frac{\rho_{ss}}{(\rho_{ss} - \rho_o)} \times (\rho_{sat} - \rho_o) \text{ in which:}$$

- $\rho_{sat}$  = density of the mixture (in kg/m<sup>3</sup>)
- $\rho_{ms}$  = concentration of dry matter in the mixture (in kg dry matter/m<sup>3</sup>)
- $\rho_o$  = density of water at 4°C (in kg/m<sup>3</sup>)
- $\rho_{ss}$  = density of the dry sediment (in kg/m<sup>3</sup>).

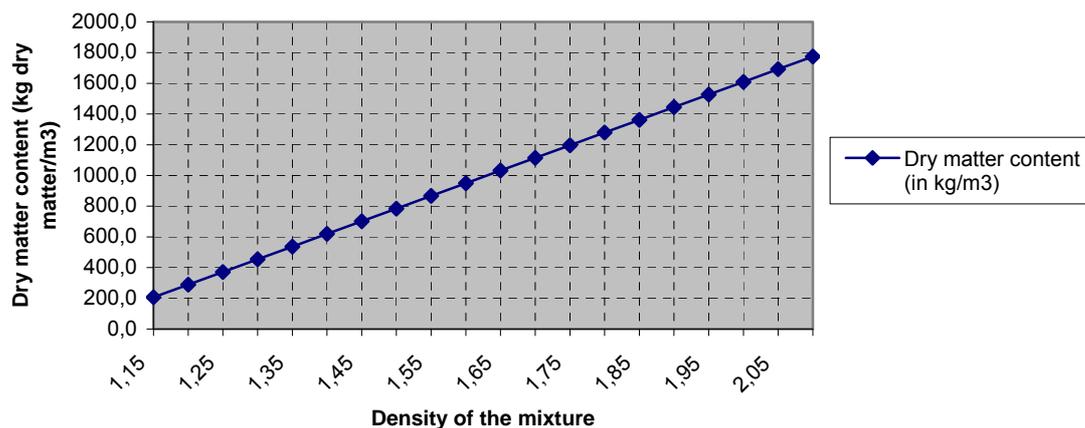

Assuming that  $\rho_{ss} = 2\,600 \text{ kg/m}^3$  and  $\rho_o = 1\,025 \text{ kg/m}^3$ , the following simplified formula is obtained:

$$\rho_{ms} = 1\,650,8 \times (d - 1\,025)$$

where d is the density of the mixture.

This can be represented graphically as follows:

**Estimation of dry matter content as a function of the density**

### Calculation of quantities of dry matter deposited

If the volume in situ to be dredged is known, an approximate calculation of the quantities of dry matter dredged can be carried out using the following assumptions according to the situation encountered:

Type of material	Mean density in situ	Density for calculation	Dry matter content (kg dry matter/m <sup>3</sup> )
Fresh sludge	1,1 to 1,3	1,2	288,9
Consolidated sludge	1,3 to 1,6	1,45	701,6
Sand	1,6 to 2	1,8	1 279,4

In practice, data relating to the mean densities in situ of the sediments dredged in the principal French ports are known and listed by the Groupement d'Interêt Economique Dragages-Ports (Port-dredging Economic Interest Grouping).

If the volume in the hoppers is known, an approximate calculation of the quantities of dry matter dredged can be carried out using the following assumptions according to the situation encountered:

Type of dredging	Type of material	Mean density in the Hoppers	Density for calculation	Dry matter content (kg dry matter/m <sup>3</sup> )
Trailer Suction dredge	Liquid sludge	1,2	1,2	288,9
	Consolidated sludge	1,25 to 1,35	1,3	454,0
	Sand	1,8	1,8	1 279,4
Mechanical dredge	Fresh sludge	1,15 to 1,25	1,2	288,9
	Consolidated sludge	1,3 to 1,4	1,35	536,5
	Sand	1,8	1,8	1 279,4

### Hydrocarbons

Hydrocarbons (Table 3b) are analysed on 2mm fraction of marine sediments, by extraction with CC14 in Infra Red.

Total CB and Oil were not requested to laboratories in 2005.

#### 2.2.2 Germany

For Germany where necessary, the quantities in Table 3a have been converted from cubic metres into tonnes dry weight. The following conversion factors (specific gravity) have been used:

in case of silt: 1,2

in case of sand: 1,8

in case of lacking information or composition of sand and silt: 1,5

in cases where no dry weight (DW) was indicated, the DW was estimated to be 50% (in order to calculate the annual load from the concentration given).

#### DDT:

From 2002 onwards, the figure given under DDT reflects the "pp-DDT-portion". Additional information for pp-DDD and pp-DDE are given in the column "other" in Table 3b.

#### Total PAH:

Like in the preceding years, the figure under total PAH reflects the sum of PAH<sub>6</sub> (benzo[ghi]perylene; benzo[a]pyrene; fluoranthene; indeno[1,2,3-cd]pyrene; benzo[b]fluoranthene; benzo[k]fluoranthene). In some instances the material dumped at a particular site can comprise sediment dredged from various dredging locations. Often a contaminant may be detected in the sediment from one location

dumped at a dumpsite whilst the same contaminant from another location (dumped at the same site) is below the detection limits. In such cases the amount of the substance dumped is given as a maximum (e.g. 0,10 tonnes + <0,02 tonnes is quoted as <0,12 tonnes).

### 2.2.3 Ireland

#### *PCB and OC determination:*

Sample plus surrogate standards are extracted with DCM/Acetone by ASE. The solvent extract is reduced in volume and cleaned up using High Resolution Size Exclusion Chromatography (SEC/GPC). The extract is further cleaned up on Florisil and Silica columns. The cleaned up extract is analysed by GCMS in SIM mode.

#### *PAH determination:*

The sediment sample is extracted with an Accelerated Solvent Extraction system using a Dichloromethane/Acetone (50/50) solvent mixture. The extract is cleaned up with Gel Permeation chromatography and Silica gel and analysed via GC/MS in SIM mode.

#### *Extractable hydrocarbons:*

Sediment is extracted with pentane, dried and analysed by fluorescence spectroscopy.

In some cases the material dumped at particular sites originates from more than one area. Sediment analysis is carried out by independent laboratories and consequently the limits of detection vary. The minimum limits of detection requested from laboratories are:

Contaminant	Concentration	Units (dry weight)	Contaminant	Concentration	Units (dry weight)
Hg	0,05	mg kg <sup>-1</sup>	CB28	1,0	µg kg <sup>-1</sup>
As	1,0	mg kg <sup>-1</sup>	CB52	1,0	µg kg <sup>-1</sup>

**Notes:**

Units are all dry weight.

**2.2.4 Spain**

The grain size fraction analysed, in all cases, it has been smaller than 0,063 mm. The methodology used for the analysis is the following:

**Sample preparation**

- Drying of the sample at 60°C during 24h.
- Sieving of the sample with a 2 mm sieve.
- Separation, when done, of the smaller than 0,063 mm fraction, using water and a 0,063 mm plastic sieve.
- Homogenisation and grinding of the sample in an agate mortar.
- Determination of the humidity by drying at 105°C up to constant weight

### **Heavy metals analysis**

For Cd, Pb, Cu, Zn, Ni and Cu:

- Acid digestion with nitric acid in a microwave oven.
- Quantitative determination by atomic absorption spectrophotometry, in flame or in graphite chamber, depending on the sample concentration.

For As:

- Acid digestion in microwave oven with nitric acid.
- Previous reduction of the sample.
- Determination by hydride generation matched to an atomic absorption spectrophotometer.

For Hg:

- Acid digestion in microwave oven with nitric acid.
- Determination by cold steam technique matched to atomic absorption spectrophotometry.

### **Poly-chlorinated-biphenyls**

- Extraction of homogenised and grinded sample with a methylene chloride:hexane (1:1) mixture.
- Extract concentration and passing through an anhydrous sodium sulphate column.
- Sulphur elimination by purification with powder of copper.
- Extract purification in column, avoiding the organochlorated compounds with a mixture of ethylic ether in hexane at successive concentrations of 6, 15 and 50%, ending with pure hexane.
- Quantitative determination by gas chromatography with electron capture detector, using an HP-S capillary column of 0,22 mm inner diameter.

### **Polyaromatic hydrocarbons**

- Extraction by means of decantation, mixture with acetone:hexane (1:1) and ultrasounds.
- Purification by means of decantation with salt saturated with sodium sulfate.
- Determination using gas chromatography with a 60 mm capillary column, BOD5 and flame ionization detector.
- Confirmation, when necessary, by means of mass chromatography.

## **2.2.5 United Kingdom**

UK methods of determination are all as previously reported to EIHA/SEABED.

Total PCBs measured consists of the following congeners:

CB 18	CB 49	CB 110	CB 149	CB 170
CB 28	CB 52	CB 118	CB 151	CB 180
CB 31	CB 66	CB 128	CB 153	CB 183
CB 44	CB 101	CB 138	CB 156	CB 187
CB 47	CB 105	CB 141	CB 158	CB 194

Total PAHs measured consists of the following PAH compounds:

2, 3 Benzanthracene	Benzo[ghi]perylene	Fluoranthene
Acenaphene	Benzo [k] fluoranthene	Fluorene
Acenaphthylene	C1-Naphthalenes	Indeno[123-cd]pyrene
Anthracene	C1- Phenanthrenes	Naphthalene
Benzo[a]anthracene	C2-Naphthalenes	Perylene

Benzo[a]pyrene	C3-Naphthalenes	Phenanthrene
Benzo [b] fluoranthene	Chrysene	Pyrene
Benzo[e]pyrene	Dibenzo[a,h]anthracene	

All analyses of dredged material on <2mm fraction. Methods of determination as specified in reports listed below:

- Allchin, C.A., Kelly, C.A. and Portmann, J.P., 1989. Methods of analysis for chlorinated hydrocarbons in marine and other samples. Aquatic Environmental Protection: Analytical Methods, MAFF Directorate of Fisheries Research, Lowestoft, (6), pp.25.
- Jones, B.R. and Laslett, R.E., 1994. Methods for analysis of trace metals in marine and other samples. Aquatic Environmental Protection: Analytical Methods, MAFF Directorate of Fisheries Research, Lowestoft, (11), pp. 29.
- Kelly, C.A., Law, R.J., and Emerson, H.S., 2000. Methods of analysing hydrocarbons and polycyclic aromatic hydrocarbons (PAH) in marine samples. Science Series, Aquatic Environmental Protection: Analytical Methods, CEFAS Lowestoft. (12), pp. 18.
- Law, R.J., Fileman, T.W. and Portmann, J.P., 1988. Methods of analysis of hydrocarbons in marine and other samples. Aquatic Environmental Protection: Analytical Methods, MAFF Directorate of Fisheries Research, Lowestoft, (2), pp. 25.
- Waldock, M.J., Waite, M.E., Miller, D., Smith, D.J. and Law, R.J., 1989. The determination of total tin and organotin compounds in environmental samples. Aquatic Environmental Protection: Analytical Methods, MAFF Directorate of Fisheries Research, Lowestoft, (4), pp. 25.

## 2.3 Toxicity

Spain: In the case of Avilés Harbour (E/5), additionally to the chemical characterisation, two different bioassays using *Chlorella vulgaris* and Microtox (*Vibrio fischeri*), were conducted. The results indicated a negative toxicity.

## 2.4 Quality assurance of analyses of dumped material

a. Do the laboratories carrying out the analyses undertake:

*Contracting Parties responding "Yes" to this question are indicated under the respective columns with their country abbreviation.*

	All	None	Some
(i) the analysis of blank samples and laboratory reference materials with each batch of samples of waste and other material dumped in the maritime area that is analysed by that laboratory;	<i>Irl, Is, F, UK</i>		<i>De, Se,</i>
(ii) periodic comparative analysis of laboratory reference materials and certified reference materials;	<i>Irl, Is, F, Se, UK</i>		<i>De</i>
(iii) the compilation of quality control charts based upon the data resulting from the analyses of the laboratory reference materials and certified reference materials, and the use of those quality control charts to monitor analytical performance in relation to all samples of dumped wastes or other materials;	<i>Irl, Is, F, Se, UK</i>		<i>De</i>

a. Do the laboratories carrying out the analyses undertake: <i>Contracting Parties responding "Yes" to this question are indicated under the respective columns with their country abbreviation.</i>	All	None	Some
(iv) periodic participation in interlaboratory comparison exercises, including, where possible, international comparison exercises;	<i>Irl, Is, F (at least yearly), Se, UK</i>		<i>De</i>
(v) periodic participation in national and, where possible, international laboratory proficiency schemes, under which: <ul style="list-style-type: none"> <li>• participating laboratories are asked to analyse samples of substances which are provided by the organisers of the scheme;</li> <li>• the composition of those samples is not disclosed in advance;</li> <li>• the results of the scheme for each participating laboratory are made available to all participating laboratories.</li> </ul>	<i>Irl, F (only in national comparison exercises), UK</i>		<i>De</i>

b. If reporting "Some" in the table above, please indicate which parts of the data set are not subject to the full range of QA procedures.

*In Germany, several laboratories, often commercial laboratories, are involved in analyses of dredged material. Most of these laboratories are accredited and apply the QA procedures (i) to (v).*

c. Describe any practical action taken to apply the QA procedures described above (e.g. participation in interlaboratory comparison exercises and international QA/QC schemes).

*Iceland: Analytical results obtained in international accredited laboratory, i.e. which has internal audit and is working according to ISO 17025.*

*Ireland: All analyses were carried out by UK Environment Agency National Laboratory Service, which takes part in the QUASIMEME Laboratory Proficiency Scheme for sediment analysis.*

d. Are any special difficulties encountered in applying Quality Assurance procedures?

## 2.5 Other relevant information

### 2.5.1 France

54 deposit sites were used in 2008 (among 88 issued).

## 3. Footnotes to all tables

### 3.1 Table 1

#### 3.1.1 Belgium

- (1) 8 permits were issued for maintenance dredging, validity: 01.04.08 – 31.12.09, tonnes licensed for these 8 permits: 28 400 000 TDS per year.
- (2) 3 permits were issued for capital dredging; 2 of the permits are valid from 15.09.08 – 30.06.09; 1 of the permits is valid from 15.09.08 – 31.12.09. The total amounts licensed for the first two permits are 2 380 000 TDS (this for the whole duration of the permit). The total amount licensed for the third one is 300000 TDS (this again is for the whole duration of the permit)

#### 3.1.1 France

One permit can be issued for one or several deposit sites

- (1) 39 used in 2008 among the 75 valid permits.
- (2) tonnes licensed represent the total amount licensed during the whole period of validity of the permit (most of the permits are granted for 5 or 10 years).

#### 3.1.2 Germany

- (1) Permits for dredging/disposing of dredged material are issued by the competent authorities of the Federal States.
- (2) Regulation by other means: Permits are not issued for dredging/disposing activities of the German Federal Water and Shipping Directorate (the Directorate does not issue permits for its own activities). However, the dredging/disposing activities of the Directorate are governed by national regulations which are in accordance with OSPAR and LC/LP requirements. Three deposit sites are notified for the first time.
- (3) This quantity refers to silt.
- (4) This quantity refers to sand.
- (5) Additionally three areas are reported where Greenpeace dumped granite boulders illegally.

#### 3.1.3 Ireland

- (1) Nine new permits were issued in 2008. Three permits were amended from earlier years for period of validity. One permit was not used. Three permits applied to plough dredging, which is not reported to OSPAR. Sediment chemistry indicated no lower or upper actions exceeded. The amount licenced was substantially more than the amount dumped. This is because most applications contained substantial amounts for contingency. Total amount licenced is calculated in wet weight, and average moisture content was taken to recalculate as dry wet.

#### 3.1.4 Netherlands

- (1) Permits issued for dumping of dredged materials at sea are licensed in cubic metres (not metric tonnes) therefore total amounts are estimated.
- (2) Permits issued for dumping of dredged materials in national waters are numerous and are not taken into account in the overview of total amounts licensed in tables 1 and 2 but are specified in table 3.
- (3) Since early 2009 a new system of regulating the disposal of dredged material is in effect in the Netherlands. A permit is no longer required. This needs to be discussed in next OSPAR/EIHA meeting.

### 3.1.5 Norway

- (1) Illegal deposit of dredged material.

### 3.1.6 Spain

- (1) In 2008 the following new permits were issued for:
  - *Ondarroa* (E/2C): 2 permits
  - *Figueras* (E/5F): 1 permit for the period 2008-2012
  - *Vilagarcía* (E/8) : 1 permit
  - *O Grove* (E/8) : 1 permit
  - *Meloxo* (E/8) : 1 permit
  - *Sevilla* (E/11): 1 permit
  - *Cádiz* (E/12): 1 permit
- (2) In the following cases the disposal operations of dredging works started (and licensed) in previous years:
  - A joint permit was issued for the followings harbours: *Laredo*, *Colindres* and *Santoña* with the same dumping site (E/3B), *Suances* (E/3C) and *San Vicente de la Barquera* (E/3D) in 2006 for the period 2006-2009.
  - *Llanes* (E/4B) permit issued in 2005 for the period 2005-2009.
  - *Avilés* (E/5) permit issued in year 2005.
  - *Luarca* (E/5D) permit issued in 2005 for the period 2005-2009.
  - *Puerto de Vega* (E/5E) permit issued in 2004 for the period 2004-2008.
  - *Navia* (E/5C) permit issued in 2007 for the period 2008-2012.
  - *San Esteban de Pravia* (E/5B) permit issued in 2007 for the period 2007-2011.
  - *San Juan de la Arena* (E/5B) permit issued in 2007 for the period 2008-2012.
  - *Viavélez* (E/5G) permit issued in 2007 for the period 2007-2011.
  - *Marín/Pontevedra* (E/9B) permit issued in 2007.

### 3.1.7 Sweden

- (1) Ten new Swedish licenses (91 690 m<sup>3</sup> approximately 56 200 tonnes) were issued in 2008 for the OSPAR Area. Four of these licenses (covering approximately 30 300 tonnes) are also reported to HELCOM.

### 3.1.8 United Kingdom

- (1) UK licensed tonnages are usually on a wet weight basis. These are the estimated dry weight equivalents.
- (2) A significant number of UK dredged material licenses are now issued for 3 years, including some with very large tonnages.

- (3) 6 000 tonnes dry weight of fish waste was licensed for deposit in the sea in 2008 under a 3 year licence issued in December 2005 to run from 1<sup>st</sup> February 2006 to 31<sup>st</sup> January 2009 *i.e.* 2 000 tonnes per annum. The material was licensed for deposit directly onto the intertidal zone but is not dumping under the terms of the Convention. 1,837 tonnes of fish waste was deposited under this licence during 2008.

## 3.2 Table 2

### 3.2.1 France

- (1) Favourable conclusions at the end of the Environmental Impact Assessment.
- (2) Site F/08508: tonnes mentioned come from 2 particular dredging sites. On that same site, others dumping operations occurred without exceeding the level 2.

### 3.2.2 Germany

- (1) Action levels and contaminant concentrations reported in footnotes (2), (3), (4) and (5) refer to fine-grained fraction <20 µm.
- (2) The maintenance of the Hamburg Seaport requires continuous dredging of the access channels to the harbour basins. According to the concept of management of dredged material established by the authority for economic and environmental affairs of the City of Hamburg, disposal of dredged material not exceeding given quality criteria can be carried out in the Elbe downstream of Hamburg only during winter time. About 1 Mio m<sup>3</sup>/a of highly contaminated dredged material is deposited on land, partially after mechanical treatment of the material. In summer 2005, there was an increasing need for dredging in order to keep accesses to the harbour basins open. However, disposal in the river Elbe in summer was not permitted, since it could severely affect the water quality (e.g. oxygen depletion). Moreover, it is suspected that large amounts of dredged material disposed of downstream of Hamburg is transported back to the harbour area. In order to reduce the need for dredging, the Hamburg Port Authority intended to remove part of the material from the sediment cycle and deposit it on land. However, it was not possible to increase the capacity of the sediment treatment plant.

Thus, in summer 2005, the Federal State Schleswig-Holstein permitted disposing of 0,8 Mio m<sup>3</sup> of dredged material in 2005 and a further 3,7 Mio m<sup>3</sup> in the period 2006 to 2008 at a sediment disposal site in the Southern German Bight, provided the permit conditions of Schleswig-Holstein were met. A long term sediment management concept is being developed. Disposal of dredged material is accompanied by a comprehensive monitoring program.

The average concentrations of contaminants exceeding action level 2 and the related amount of dredged material are shown in Table 2 in column (4) + (5).

- (3) dredging areas from Elbe-km 639 to 685,5
- Part of the dredged material from the inner Elbe estuary beyond the OSPAR-Convention area was disposed of in the OSPAR area, since the capacity of deposits near the dredging sites was depleted. Furthermore, it is supposed that there is a return transport of dredged material from close-by deposits due to hydromorphological conditions. Disposal of part of the material at more seaward sites should reduce the increased sediment amounts to be dredged. A new concept for the management of dredged material is under development.
- The average concentrations of contaminants exceeding action level 2 and the related amount of dredged material are shown in Table 2 in column (4) + (5).

- (4) dredging areas from Elbe-km 685,5 to 748,0

Although pp-DDE and pp-DDD concentrations exceed action level 2 slightly, disposal in the Elbe estuary was allowed, as no contaminants are added to the estuary. Sediments are dredged and relocated within short distance. A considerable amount of dredged material disposed of is returned by the currents, and therefore the same material has to be dredged and disposed of repeatedly. The concentrations of pp-DDE and pp-DDD in the dredged material and in suspended particulate matter of the Elbe are very similar. There is no local source for these contaminants in the dredging area, however they originate from the upper reaches of the Elbe.

The average concentrations of contaminants exceeding action level 2 and the related amount of dredged material are shown in Table 2 in column (4) + (5).

- (5) dredging area in the harbour of Wangerooze

The average concentration of HCB exceeding action level 2 and the related amount of dredged material are shown in Table 2 in column (4) + (5). Level 2 concentrations were exceeded only marginally and the overall amount of dumped material also was low. Thus the total load of HCB disposed of was negligible.

### 3.2.3 Sweden

No material dumped during 2008 was considered to have exceptionally high pollutant concentrations.

## 3.3 Table 3 a

### 3.3.1 Germany

- (1) Sand, exempted from chemical analyses.
- (2) Silt.
- (3) Water injection dredging.
- (4) Illegal dumping by Greenpeace of granite boulders (320 stones each 1-3 t).

### 3.3.2 Netherlands

- (1) The amounts for deposit sites NL-10, 11 and 13 were not available at the time of reporting.

### 3.3.3 Norway

- (1) No permit, illegal deposit

### 3.3.4 Sweden

- (1) 11 400 m<sup>3</sup>. Dredging at three sites (Gotenius varv, Nya varvet, Risholmen). Dry weight was calculated by Göteborg Harbour. Previously used dumping site.
- (2) 40 m<sup>3</sup>. Dredging at Brevik/Vråkär. Dry weight was calculated by Göteborg Harbour. Previously used dumping site.
- (3) Two dredging sites. Estimated volumes for Lerkil harbour: 8000 m<sup>3</sup> (clay) and for Sandö harbour: 4000 m<sup>3</sup>. Permits issued in 2004. The operations were carried out in 2006 but have not previously been reported. New dumping site.
- (4) 1250 m<sup>3</sup> sand. Permit issued in 2005. New dumping site.
- (5) 55 450 m<sup>3</sup> postglacial clays containing organic material. Permit issued in 2007. Previously used dumping site.
- (6) 12 630 m<sup>3</sup> clay-gyttja. Permit issued in 2007. New dumping site.

### 3.3.5 United Kingdom

- (1) NS100 was a deposit site in the North Sea disposal of pipeline pre-sweep sediment.
- (2) XX999 was a site for the disposal of sediment/rock from the emplacement of monopiles.

## 3.4 Table 3 b

### 3.4.1 Germany

- (1) Sand which is exempted from analyses according to § 5.3 of the OSPAR Guidelines for the Management of Dredged Material is given as additional information in Table 3a.

### 3.4.2 Netherlands

- (1) The amounts for deposit sites NL-10, 11 and 13 were not available at the time of reporting.
- (2) Individual PCBs are determined but not reported since a limit is introduced for sum PCB 7.

### 3.4.3 Sweden

- (1) Amounts of pollutants (except for Cu) were calculated by Göteborg Harbour.
- (2) Quantification limits: Hg <0,05 mg/kg; Cd < 0,1 mg.kg. Concentrations of ΣPCB7 and TBT were below quantification levels (not stated).
- (3) Additional data: Co 0,028 tonnes, Sn 0,012 tonnes
- (4) As the sediments were considered to be homogeneous only the uppermost 5 cm was analysed. Additional data: Co 0,338 tonnes, V 1,540 tonnes, MBT 0,2 kg, DBT 0,2 kg, ΣPHA16 12 kg.
- (5) Quantification limits ΣPCB7 <0,01 mg/kg; TPhT <1 µg/kg. Additional data@ Co, 0,021 tonnes, V 0,127 kg, ΣPAH16 4,8 kg, MBT 0,07 kg, DBT 0,03 kg, TPhT < 0,005 kg
