

PARCOM Decision 80/1 on Environmental Quality Standard for Mercury in Organisms

(Source: PARCOM II/11/1, para 41)

The Commission adopted TWG's¹ recommendation that a standard of 0.3 mg/kg of mercury in wet fish flesh should be the environmental standard for organisms. It took note that further specification of this standard, especially in relation to its monitoring and application procedures, would be discussed by TWG at its next meeting.
